

I am Customer

A doctor
managing
daily
consultations.

A patient
seeking
medical
consultation.

A hospital
administrator

Receptionist
managing
appointments

Caregiver
booking
appointments
for family
members

First-time
patient
looking for a
specialist

I'm trying to

Find a qualified
doctor and
book an
appointment
quickly.

Organize
appointments
and manage
patient schedules
efficiently.

Manage doctors,
appointments,
and patient
records
efficiently.

Find doctors by
specialization.
Compare
doctor
availability.

Cancel or
reschedule
appointment
s.

View
appointment
history.

Receive
appointment
reminders.

But

I cannot easily find available doctors or convenient appointment slots.

I spend too much time handling appointment requests and cancellations manually.

It is difficult to monitor all activities using manual processes.

Unable to compare doctor availability.

Long waiting times.
Difficulty finding specialists nearby.

Manual record maintenance

.

Lack of appointment reminders.

Because

Most hospitals use manual or fragmented booking systems with limited information.

There is no centralized system to automate scheduling and patient communication.

There is no centralized platform for healthcare management and reporting.

Hospital systems are not integrated. Manual scheduling causes delays.

Limited online booking options.

Patient records are maintained separately.

Lack of centralized healthcare management.

Which makes me feel

Frustrated,
stressed, and
uncertain about
receiving timely
healthcare.

Overloaded,
less productive,
and unable to
focus fully on
patient care.

Overwhelmed
and concerned
about
operational
efficiency.

Confused
while
selecting
doctors.

Worried about
missing
appointments.

Dissatisfied
with waiting
time.

Inconvenienc
ed by
manual
processes.

Less
confident in
the booking
experience.
